

This thesis focuses on internet crime where children are the victims.

In the theoretical part of this work, different types of internet crime are described, with a special focus on internet crimes against children. Furthermore, it summarizes the basic knowledge of the aggressors and perpetrators of this activity, the prevalence of this crime, and last but not least it gives information about their victims.

The empirical part of this work is devoted to the qualitative study of the list of cases targeting internet crime against children and to the quantitative study which identifies the experiences of children with the Internet today.
